Skills

Programming	
JavaScript	
Nix (& Nixpkgs/NixOS)	
Rust	
React	
NodeJS (& Express)	
HTML/CSS	
Java	
Python	
Vue	
C	
C++	
SQL	
PHP	
Spring	
Operating Systems	
Linux	
Windows	
MacOS	
Tools	
Git	
Docker	
Languages	
Portuguese	Native
English	C1 (IELTS Band 8.0)

Open Source

Contributions in the following projects:

- Nixpkgs  (Packaging, Bug Fixes, and more)
- Strapi  (Small Enhancements, Bug Fixes, Security Vulnerability Patching, Translations)
- STAYAWAY COVID  (Dark Mode)
- Vuepress  (Bug Fixes)
- Listmonk  (Translations)
- Umami  (Translations)
- phhusson's vendor_hardware_overlay  (Android Device Overlay)
- Firefly-III  (Bug Fixes)
- BungeeCord  (Bug Fixes)
- automatic-timezoned  (New Features)

Education

 2023 - 2025
 KTH Royal Institute of Technology, Sweden

Master's in Cybersecurity

- Master's Thesis: **Classa: Uncovering Class Pollution In Python**, resulting in the reporting of critical-severity CVE-2025-58367
- Courses in Network & Systems Security, Cryptography, Ethical Hacking, and Language Based Security, among others

 2020 - 2023
 Técnico Lisboa, Portugal

Bachelor's in Computer Science and Engineering (LEIC-A)

- Final average: 18.63/20 (19)
- Elected Year Delegate (2020 - 2023) and Degree Delegate (2022 - 2023)
- Awarded Academic Excellence Diploma (2020/2021)
- Awarded Academic Merit Diploma (2021/2022)
- Awarded Academic Excellence Diploma (2022/2023)
- Top 3 amongst students who enrolled in LEIC-A in 2020/2021 (out of ~180)
- Member of the University's Pedagogic Council

Professional Experience

 Nov 2024 - Present
 Ethiack

Penetration Tester
Freelance

- Conducted penetration testing for Ethiack's customers, finding high-severity vulnerabilities and proposing mitigations.

 Sep 2024 - Jan 2025
 LangSec Group, KTH Royal Institute of Technology

Research Assistant
Amanuensis

- Researched the impacts and prevalence of client-side prototype pollution in JavaScript on various websites
- Developed a Chromium fork to detect prototype pollution gadgets when visiting a vulnerable website, using dynamic analysis

 April 2021 - July 2023
 DASI, IST, Lisboa

Research Initiation Grant
Full Stack Developer

DASI is Técnico Lisboa's IT Services' Development Team, which I joined during my first year at the university. It is responsible for developing and managing the school's learning management system, FenixEdu, and other services. I developed a new version of the public API, as well as various bug fixes and UX improvements, some of which were my initiative.

Projects

Resumos LEIC 
 2021 - Present
 React (GatsbyJS); Markdown

A completely open source website, dedicated to the creation of class notes focused on the courses in the curriculum of the BSc in Computer Science and Engineering at Técnico Lisboa, improving the academic performance of students. Currently, it achieves more than 30k monthly views across all pages.

Triton - Minecraft Plugin 
 2016 - Present
 Java; SpigotMC API

A Minecraft plugin that intercepts network packets in search of placeholders, replacing them with translated messages in the player's language. The project, which is written in Java, has more than 100 classes and 7000+ lines of code.

TWIN - Triton Web INterface 
 2019 - Present
 JavaScript; React; NodeJS

A web app to configure the Triton plugin. Made with React, Redux and React Router, it allows for easily configuring the plugin, avoiding the need to manually editing JSON configuration files.

Craftathon 
 2017, 2018
 NodeJS; PHP

Craftathon was an American charity event, where I configured the ticketing system with Paypal. In the first edition, we used PHP, while in the second one we used NodeJS.

Livraria e Papelaria Espaço 
 2021 - Present
 React (NextJS); NodeJS (Strapi)

An online e-commerce store for a local bookstore, made with NextJS and Strapi. In addition to the online store, I have also made an internal program in order to speedup repetitive tasks, such as adding products to the billing program, saving dozens of manual labor hours.

Portugal Ultra Triathlon 
 May, June 2018
 PHP; HTML / CSS

PUT was a charity event with the goal of raising funds to 4 Portuguese associations related to sports. The website and donation system was made with HTML/CSS and PHP.

Frigu 
 2022
 Rust; Yew.rs + Axum.rs

A web application, developed in Rust and that uses Web Assembly for the frontend, to manage a small community fridge, keeping the transaction history and balance of each user. Docker images are automatically published on every release through GitHub Actions.

IST Delegate Election 
 2023
 Rust; TypeScript/React.js

An online voting platform used by the Técnico Lisboa's Pedagogical Council for delegate elections, made with Rust and Axum.rs for the backend, and Typescript and React.js for the frontend. It integrates with the school's OAuth system and avoids storing personal information at all costs.

... and many other small projects

Extra Curriculars

- Member of Security Team @ Técnico (STT) 
- Member of RoyalRoppers at KTH 
- Represented Portugal at ECSC 2024 and 2025 
- Informatics I and Web I Instructor at AfterSchool by TreeTree2 
- Portuguese Olympiad in Informatics 2020
- Portuguese Olympiad in Physics 2019
- Federated Athlete at Portuguese Athletics Federation (2018 - Present)
- Member of Hackerschool student group at IST 
- Advent of Code Participant
