About

I am a versatile Software Engineer and Technical Leader with over 5 years of experience specializing in building scalable, user-centric digital experiences across the full stack. My expertise is rooted in a deep understanding of Frontend engineering (React, Next.js, Angular) and Backend architecture (Node.js, Express, NestJS), complemented by a proven track record in cross-platform mobile development (Ionic).

Throughout my career—which has been 100% remote—I have thrived in global, distributed teams, successfully navigating leadership roles from Frontend Lead to CTO. I specialize in bridging the gap between complex technical requirements and intuitive UI/UX design.

Technical Highlights:

Frontend & Cross-Platform: Expert in React, Angular, and Ionic (iOS/Android), with a focus on performance optimization and pixel-perfect implementation using Tailwind CSS and Material UI.

Backend & Cloud: Proficient in architecting RESTful APIs and microservices using Node.js, Express, and Go, supported by PostgreSQL, MongoDB, and AWS infrastructure.

Specialized Integrations: Extensive experience with Web3/Blockchain (Wagmi, Ethers), payment systems (Stripe Connect, Apple/Google Pay), and AI-driven tools (Python, custom chatbots).

Engineering Leadership: Skilled in managing the SDLC from prototype to production, conducting rigorous code reviews, mentoring interns, and spearheading major codebase migrations (Angular to React).

Beyond the code, my background in Electronic & Computer Engineering from the University of Nottingham and my experience living and working across diverse cultures allow me to bring a global perspective to product development. I am a proactive communicator who aligns technical strategy with business goals to deliver high-impact results.

I am passionate about building inclusive, globally relevant software and empowering engineering teams. Let's connect to discuss how my full-stack expertise can drive your next project's success.
